Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

On Nov 16, 2001 this sequence version replaced gi:15620649.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em; EMBL: Sw;

SWISSPROT; TT:, TREMBL; WENREDP, Information on the WORNDEP

there. Annow the feature table with their source databases: Em; EMBL: Sw;

It currently consists of 14 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Homo sapiens chromosome 1 clone RP1-314M19 map q31.1-31.3, unordered pieces.
                                                                                                                         Eukaryoča, Metazoa, Chordata, Craniata, Vertebrata, Butele

                                                                                                                                                                                                                                                                                                                                                                                                                Assembly program: XGAP4, version 4.5
Sequencing vector: plasmid; L08752; 100% of reads
Chemistry: Dye-terminator ET-amersham; 22% of reads Chei
Dye-terminator Big Dye; 77% of reads
Consenus quality: 101500 bases at least Q40
Consenus quality: 104399 bases at least Q30
Consenus quality: 105813 bases at least Q20
Insert size: 106619; sum-of-contigs
Quality coverage: 3.51x in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            general control of 6246 Lp.

393: gap of 100 Lp.

393: gap of 100 bp.

393: gap of 100 bp.

39378: control of 5745 bp in length.

39378: control of 100 bp.

377: control of 100 bp.

37536: control of 3658 bp in length.

37: 102981: control of 345 bp in length.

382: 103081: gap of 100 bp.

392: 103081: gap of 100 bp.

392: 103081: gap of 100 bp.

392: 107919: control of 5345 bp in length.

392: 107919: control of 4838 bp in ler.

The RGS (regulators of G-protein signaling) protein genes, clones AAH16395 and m1975, were identified in human and murine spleen CDNA libraries, respectively. Both proteins have unique N- and C-terminal

Claim 1; Page 100-102; 105pp; English.

	sequences. The C-terminal location of the RGS domain is consistent with RGSs known to act as GTPses activating proteins (GAPse) for G-alpha proteins. G-alpha-i linked receptors support rapid adhesion and directed migration of leukocytes and other cell types. The novel RGS proteins may be used to modulate cell adhesion and chemotraxis, e.g. for adding wound repair. The RGS proteins, related cDNAs and anti-RGS antibodies are useful for modulation, diagnosis and treatment of immune and respiratory

The invention is useful for identifying an agent that binds to human or mouse RGS protein or its variant, or RGS protein encoded by homologous DNA sequences, or a host cell expressing the RGS protein or its variant, or RGS protein encoded by homologous DNA sequences. The agents identified using the invention are

New isolated polynucleotide, useful in research, diagnostic or therapeutic methods, e.g. preventing or treating disorders involving aberrant protein expression or biological activity.

Claim 1; SEQ ID NO 120; 394pp; English.

The present invention relates to novel human coding sequences (AB099268-CAB099608) and proteins (ABF64682-ABF65022). The sequences are useful in the respective, diagnostic and research methods. The polymucleorides may be used in the field of molecular biology as hybridisation probes, primers of protein, or in generation of anti-sense DNA or RNA. The polymucleorides are useful in diagnostics as expressed sequence tags (ESTS) for identifying expressed genes or for physical mapping of the putritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or pluripotential state useful for re-engineering damaged or diseased tissues, transplantation, manufacture of bio-pharmaceuticals or the development of bio-sensors. The polymucleotides and proteins are useful for preventing, treating or manufacture of bio-pharmaceuticals or the development of bio-sensors. The polymucleotides and proteins are useful for preventing, treating or polymucleotides and proteins are useful for preventing, treating or polymucleotides and proteins are useful for preventing, treating or bological activity, e.g. neematopletic disorders, central/peripheral nervous system diseases, mechanical and traumatic disorders, non-healing valual, bacterial or fungal infection, autoimmune disorders, allergic complated mainly by sequencing by hybridisation, and in some cases, sequences obtained from one or more public databases. Note: The sequence of the invention were assembled from the sequence of adata for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed sequence.

The present invention relates to the isolation of polynucleotide sequences, that encode a novel regulator of g protein signalling (RGS) polypeptide, RGS18, from human platelets. The invention also provides nucleotide primers and probes specific for an RGS18 nucleic acid. The sequences of the invention are useful for the manufacture of a medicament for the prevention or treatment of a platelet activation dysfunction, such as arterial thrombosis, myocardial infarction, coronary artery disease, stroke, cerebrovascular disease, unstable angina, deep vein thrombosis, systemic thromboembolism, and in invasive cardiac procedures

for anti-coagulant purposes. The sequences of the invention can also be used for the detection of RGS18 nucleic acids and RGS18 polypeptides. The present sequence represents 5'-RACE clone DNA used to generate the full length human RGS18 CDNA.

The invention also provides nucleotide primers and probes specific for an RGS18 nucleic acid. The sequences of the invention are useful for the manufacture of a medicament for the prevention or treatment of a platelet activation dysfunction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated regulator of G protein signaling polypeptide, useful for prevention/treatment of platelet activation dysfunction, such as arterial thrombosis, myocardial infarction, coronary artery disease and stroke.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1375
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1495
such as arterial thrombosis, myocardial infarction, coronary artery disease, stroke, cerebrovascular disease, unstable angina, deep vein thrombosis, systemic thrombosine, and in invasive cardiac procedures for anti-cosqulant purposes. The sequences of the invention can also be used for the detection of RGS18 nucleic acids and RGS18 polypeptides. The present sequence represents a cDNA sequence from an Incyte clone derived from a human thyroid library. The sequence is used to isolate the full length cDNA encoding RGS18 from human platelets
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360

The RGS (regulators of G-protein signaling) protein genes, clones AAH16395 and m1975, were identified in human and murine spleen cDNA libraries, respectively. Both proteins have unique N- and C-terminal sequences. The C-terminal location of the RGS domain is consistent with RGSS known to act as GTPase activating proteins (GAPs) for G-alpha proteins. G-alpha-i linked receptors support rapid adhesion and directed migration of leukocytes and other cell types. The novel RGS proteins may be used to modulate cell adhesion and chemcaxis, e.g. for aiding wound repair. The RGS proteins, related cDNAs and anti-RGS antibodies are useful for modulation, diagnosis and treatment of immune and respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RGS; regulators of G-protein signaling; GTPase activating protein; GAP; G-alpha protein; cell adhesion; Ohemotaxis; vulnerary; immunosuppressor; anti-rheumatic; anti-arthritic; anti-dabetic; anti-inflamatory; cytostatic; hepatotropic; anti-anaemic; modulator; gene therapy; ss.

                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                              The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ98194-ABQ99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilical vein endothelial cells (HUVEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and nucleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated disorder, e.g. cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at sequence.

The invention relates to screening assays for identifying an agent that binds to: human or mouse RGS (regulators of G-protein signalling) protein or its variant, or RGS protein encoded by homologous DNA sequences; or a host cell expressing the RGS protein or its variant, or RGS protein encoded by homologous DNA sequences. The invention is useful for encoded by homologous DNA sequences. The invention is useful for variant, or RGS protein encoded by homologous DNA sequences, or a host cell expressing the RGS protein or its variant, or RGS protein encoded by homologous DNA sequences. The agents identified using the invention are useful for modulating the activity of RGS proteins and thus useful for treating immune and inflammatory disorders (Grave's disease, allergy, arthitis), respiratory disorders (asthma, preumonia, sinusitis), arthitis), and insusitis proteins are arthitis).

The present invention relates to the isolation of polynucleotide sequences, that encode a novel regulator of g protein signalling (RGS) polypeptide, RGS19, from human platelets. The invention also provides nucleotide primers and probes specific for an RGS18 nucleic acid. The sequences of the invention are useful for the manufacture of a medicament for the prevention or treatment of a platelet activation dysfunction, such as arterial thrombosis, myocardial infarction, coronary artery disease, stroke, cerebrovascular disease, unstable angina, deep vein thrombosis, systemic thrombosimolism, and in invasive cardiac procedures for anti-coagulant purposes. The sequences of the invention can also be used for the detection of RGS18 nucleic acids and RGS18 polypeptides. The present cDNA sequence encodes for a partial human platelet RGS domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               546
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated regulator of G protein signaling polypeptide, useful for prevention/treatment of platelet activation dysfunction, such as arter thrombosis, myocardial infarction, coronary artery disease and stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               487 GAAGAAAATATTGAATTTTGGATAGCCTGTGAAGATTTTCAAGAAAAGCAAGGGACCTCAA

The RGS gene is located on chromosome 1. The RGS polymucleotide and polypeptide are useful for identifying test compounds, that may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The polymucleotide, polypeptide or vectors comprising the polymucleotide, and the reagents are useful for modulating the activity of RGS in a disease, particularly in asthma or diabetes

The polypeptide and the polymuclectide encoding it are useful in the diagnosis and treatment of malignant tumours, haemopathy, HIV infection, immunological diseases and various inflammatory diseases. The present sequence encodes the

```

The present invention relates to methods of diagnosing breast cancer in a patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-

```
ABT11112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as adagnostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coling sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                        504

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for predicting, diagnosing or prognosing chronic lung disease by detecting a chronic obstructive pulmonary disease (COPD) gene related polynucleotide (see ACC46750 to ACC467777, which encode the COPD related proteins in ABP96779 to chronic lung disease in a biological sample. The COPD genes and proteins or chronic lung disease in a biological sample. The COPD genes and proteins encoded by them from the present invention (I) can be used for treating or preventing chronic lung disease in a mammal. (I) can be used in an animal model for determining the efficacy, toxicity, or side effects of treatment with (I), and determining the mechanism of action of (I).

ACC46778 to ACC46903 represent COPD related PCR primers and probes used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1,
